ABSTRACT

A method for preparing a substrate having an adherent, durable, flexible, and stain resistant layer ~~having durability and flexibility, said. The layer comprising is formed by~~ applying a composition that includes (i) the reaction product of a reactive polyester having ~~free carboxylic acid and/or hydroxyl groups, a hydroxyl terminated polymer including repeat units from an~~ and a polyoxetane having at least one carboxylic acid end group and at least one pendant $-\text{CH}_2\text{-O}-(\text{CH}_2)_n\text{-Rf}$ groups group ~~(said Rf groups generally being a fluorinated alkyl group)~~ and (ii) an amino resin curative. The substrate may be printed or embossed or both. The coated substrate has both stain resistant properties and dry erase properties ~~with dry erase markers. The coated substrate can be used as prepared or applied to other substrates.~~
